

Learn About CAR T-Cell Therapy

Talk to someone directly about the latest advances in chimeric antigen receptor (CAR) T-cell therapy, a type of immunotherapy that uses a person's own immune cells (T cells) to identify and attack cancer cells. It may be a treatment option for you or a loved one.

Information Specialists are highly trained oncology social workers and nurses who provide patients and caregivers with accurate disease and treatment information, including disease-specific information about CART T-cell therapy, along with comprehensive resources.

Clinical Trial Nurse Navigators are registered nurses with expertise in blood cancers who personally assist adult and pediatric patients and caregivers throughout each step of the clinical trial process. While CAR T-cell therapy is approved for many diagnoses, it is also being studied in clinical trials. Call **800.955.4572** Monday to Friday, 9 a.m. to 9 p.m. ET
